SUMMARY

Product Manager with 2+ years across regulated fintech (KYC/AML), edtech growth and e-commerce operations (WMS, OMS). First PM hire at Zamplitude, owning a regulated investment firm's KYC/AML platform; at Newton School, launched AI exam monitoring and nearly doubled sign-up conversion. Focused on B2B fintech platforms and applied AI.

SKILLS

- **Product**: Discovery, user research and interviews, JTBD, PRDs and user stories, acceptance criteria, UAT, roadmapping, prioritisation (RICE, MoSCoW), OKRs, go-to-market, Agile/Scrum, stakeholder management
- **Growth and data**: A/B tests, experimentation, funnel/cohort analysis, SQL, Mixpanel, GA4, CleverTap, Metabase, Excel
- **AI**: GenAI and LLM applications, agentic workflows, RAG, evals, human-in-the-loop design, prompt engineering
- **Technical and domains**: REST APIs, API specs, Python, Jira, Confluence, Notion; KYC/AML, payments, WMS, OMS

EXPERIENCE

Product Manager Mar 2026 – Present
Zamplitude, Dubai-based fintech firm *Remote, India*

First PM hire. Own discovery and Agile delivery of a KYC/AML compliance platform (risk scoring, compliance review, AML screening) for a regulated investment firm; the first module shipped on schedule.

- Partnered with the client's Compliance Officer on risk-scoring bands and auto-approval thresholds over verified digital-ID data, replacing case-by-case review: 68% of applications auto-cleared and turnaround fell from 72 hours to under 8.
- Traced where KYC reviews stalled through 12 requirement sessions with 4 client compliance stakeholders, then redesigned the review and approval workflow, lifting first-pass compliance clearance from 23% to 61%.
- Cut question-change turnaround from 5 days to same day by replacing an email approval trail with a compliance dashboard: two-level sign-off for KYC and Enhanced Due Diligence (EDD) questions, plus EDD assignment to flagged users.
- Audited 30+ compliance actions against regulatory obligations, exposing shared-login risk, and prioritised a Roles and Permissions module over competing scope, replacing every shared login with individual, role-based access.
- Parsed the AML vendor's specification programmatically, flagged 2 contradictions before build and published a mock service with API contracts, unblocking frontend and QA 3 weeks before sandbox access (~120 hours of rework saved).

Associate Product Manager Mar 2025 – Mar 2026
Newton School, edtech *Bengaluru, India*

Acquisition, enrolment, payments and exam-operations products for an online tech-education platform.

- Found manual proctoring could not scale across 15,000+ exam sessions; took an AI exam-monitoring system from 0 to 1 through discovery, PRDs and a cross-functional launch, cutting manual proctoring from 100 to 30 hours per exam batch.
- Lifted referral-to-signup conversion from 7% to 12% by pinpointing drop-off through funnel and cohort analysis, prioritising an incentive redesign over competing bets and validating it in A/B tests.
- Owned acquisition-funnel experimentation: landing-page A/B tests prioritised by impact and effort and tracked on self-serve dashboards (DAU/MAU, activation); sign-up conversion nearly doubled, from 10% to 19.1%.
- Diagnosed bottlenecks in manual payment reconciliation and replaced it with a Razorpay API integration (API specs, QA): payments reconciled in real time with no mismatches, reducing manual reconciliation effort by 99%.
- Identified enrolment bottlenecks behind stalled waitlists and shipped an automated seat-allocation workflow: 60 of 200 waitlisted learners (30%) converted to enrolments and no seats went unfilled.

Product Management Trainee Aug 2024 – Mar 2025

HealthKart, health and nutrition e-commerce *Gurugram, India*

Product trainee on the warehouse, inventory and order management systems (WMS, OMS) that run HealthKart's fulfilment.

- With warehouse ops and engineering, cut picking errors by 10% by introducing scan-based WMS validation and FEFO (first-expiry, first-out) checks, backed by SOPs and staff training.
- With the OMS engineering team, cut stock-out cancellations from 8% to 6% and order-to-dispatch time from 10 to 8 hours by syncing inventory across sales channels and routing orders to the nearest in-stock warehouse.
- Ran user research with internal ops users to map journeys and surface workflow gaps; prioritised a platform migration and wrote its PRDs and user stories, removing a blocker to SOC-2 compliance.

Category Management Intern (PGDM internship) Apr 2023 – Jul 2023

Healthmug, health e-commerce *New Delhi, India*

- With the category team, lifted the repeat-purchase rate from 20% to 25% by analysing purchase behaviour for repeat drivers and changing merchandising and retention tactics to match.
- Spotted demand gaps in category data and expanded the assortment from 1,230 to 1,820 SKUs (+48%), driving 35% month-on-month category growth.

PROJECTS

Signal | *Agentic LLM feedback-triage prototype* | signal-theta-ten.vercel.app | 2026

- Built an agentic LLM pipeline that classifies, clusters and scores scattered user feedback into ranked, evidence-linked recommendations on what to build next.
- Added explainable scoring, a human-in-the-loop review step and an evaluation harness that measures theme recall, precision and hallucination rate against a labelled set.

Cairn | *RAG coaching assistant prototype* | github.com/FarazO7/cairn

- Grounded a coaching assistant's answers in a custom corpus using cosine-similarity embedding search.

EDUCATION

MDI Murshidabad | *PGDM, Marketing & Supply Chain Management*

KIIT University | *B.Tech, Electronics & Telecommunication Engineering*
