

Increasing the number of reviews on food deliveries

Team: Rating and Review

Contributors: Faraz Ali

Status: In Development

Problem Definition

- **What is the problem?**
Zomato's power users (those who frequently order food and contribute significantly to revenue) are not leaving reviews, particularly after positive experiences. This is due to a combination of factors: forgetting to write, lack of incentive, uncertainty about content, and difficulty accessing the review process.
- **Who is facing the problem?**
Zomato's power users (who order 3-5 times a week), representing a significant segment of the platform's active user base.
- **What is the business value that will be unlocked by solving the problem?**
Increased review volume and quality lead to:
 1. Enhanced platform credibility and trust.
 2. Improved restaurant visibility and customer acquisition.
 3. Increased user engagement and loyalty.
 4. Potential for higher order value and revenue growth.
- **How will the target users benefit if the problem is solved?**
Power users will:
 1. Get rewarded for their feedback, making it a more valuable experience.
 2. Feel more empowered to share their opinions and influence other users.
 3. Benefit from a more streamlined and engaging review process.
- **Why is it urgent to solve this problem now?**
The food delivery market is highly competitive. Addressing the review system shortcomings is crucial to attract and retain power users, drive platform growth, and stay ahead of competitors.

Goals

- **Increase Review Volume:** Achieve a 10% increase in the number of reviews written by power users within 3 months of launch.
- **Improve Review Quality:** Increase the average length and detail of reviews by 10% within 3 months.
- **Enhanced User Engagement:** Observe a 10% increase in the number of power users interacting with the review system within 3 months.

Non-Goals

- This project will not focus on addressing issues related to review moderation or fake reviews.
- This project will not be focusing on other metrics mentioned in the KPI tree other than product outcomes.

Validation of the problem

- 66.6% of users have never left a review.
- 26.7% of users left a review when they had a positive experience.
- 33.3% of users don't leave a review because it is a long process.
- 53.3% users will be motivated by incentives.

Who left a review?

Who left a review for positive experience?

Who did not leave a review because of the long process?

Will the users leave reviews if given incentives?

Understanding the target audience

Who?

Power Users - users who order food through Zomato frequently (3+ times a week)

Why?

- Have high order value.
- Contribute significantly to the platform's revenue.

User Persona

	
Rishi	Anchal
30, Software Engineer, Pune	22, Graphic Designer, Delhi
Busy, values convenience and tasty food, often forgets to write reviews.	Not sure if her review would make a difference, needs prompts to write effectively
Pain Point: Forgetting to write	Pain Point: Lack of incentive
Goal: Easy and convenient way to add reviews.	Goal: To get reward and acknowledgement for writing a review.

Solution

Zomato Review Quest - A Gamified Approach to Encourage Reviews

Concept:

Transform the review process into a fun and engaging "quest" for users, incentivized by loyalty points and gamified elements to increase participation and reward contribution.

Key Features:

- **Daily Review Quest:** Users are presented with a daily quest to leave a review for a restaurant they recently ordered from. This quest is triggered after a user completes an order, prompting them with a notification: "Complete your daily review quest and earn points!".
- **Point Rewards:** Completing a review quest awards users with loyalty points. The number of points earned can vary based on the review's length and detail.
- **Quest Progression:** Users can track their progress towards a specific goal or unlock new rewards through a visual progress bar. The quest can have multiple levels, with increasing point rewards as users complete more reviews.
- **Badges and Achievements:** Users earn badges for achieving milestones, like completing a certain number of reviews in a week or achieving a high average review score. Badges can be displayed on their profile and act as a status symbol.
- **Leaderboards:** Create leaderboards where users can compete with others to earn the most points and climb the ranks. This encourages friendly competition and motivates users to leave more reviews.
- **Exclusive Rewards:** Offer unique rewards for reaching higher tiers on the quest progression or for achieving specific badges. This could include discounts on their next order, access to exclusive deals, or special offers.

Gamification Elements:

- **Quest Theme:** A fun and engaging theme to represent the review process, like "Food Explorer" or "Taste Tester," can enhance the user experience and make the quest feel more immersive.
- **Visual Progress Tracker:** Use a visually appealing progress bar to track the user's progress through the quest levels.
- **Badges:** Design visually appealing badges with unique names and descriptions, like "Foodie Connoisseur," "Honest Critic," or "Delivery Champion."
- **Leaderboards:** Create a visually engaging leaderboard that showcases the top performers, motivating users to strive for higher rankings.

User Flow:

Key Logic:

- **Points System:** The system calculates points based on user actions like completing reviews, with different point values assigned to reviews of varying lengths and detail.
- **Quest Progression:** A system tracks user progress through different levels of the quest, unlocking new rewards and badges as they complete objectives.
- **Leaderboard Tracking:** The system tracks user performance based on points earned and displays it on the leaderboard.

Benefits:

- **Increased Review Volume:** Gamification encourages frequent participation and motivates users to leave reviews.
- **Improved Review Quality:** By awarding more points for longer and more detailed reviews, Zomato can encourage users to provide more valuable feedback.
- **Enhanced User Engagement:** The gamified approach increases user interaction with the review system, making it more enjoyable and rewarding.
- **Increased Loyalty:** The loyalty points system and exclusive rewards incentivize users to continue using the Zomato platform.

Implementation Notes:

- **Integration with Loyalty Program:** Seamless integration with Zomato's existing loyalty program is essential to avoid confusion and ensure a smooth user experience.
- **Clear Communication:** Clearly explain the quest system, point structure, and rewards to users through in-app tutorials and marketing campaigns.
- **User Feedback:** Continuously collect user feedback and iterate on the system based on user responses and performance data.

This gamified approach, combined with a simplified review flow and clear incentives, can effectively address Zomato's power user engagement challenges and unlock significant value for both users and the platform.

Wireframe

Key Milestones: (Estimated)

Launch Checklist:

- Support: Ensure customer support is equipped to handle inquiries related to the new review system.
- Operations: Ensure proper integration with existing loyalty program systems and analytics tools.
- Internal Stakeholders: Communicate with relevant teams (engineering, design, marketing, operations) to ensure smooth launch and post-launch support.

Experimentation Plan:

A/B test the new review system against the existing one, focusing on power users.
Measure the impact on review volume, review quality, user engagement, and key business metrics.
Adjust and optimize the system based on user feedback and performance data.

Open Questions & Decisions Taken:

Decision: Focus on gamification rather than complex AI-driven review suggestions in the initial launch.

Decision: Prioritize integrating the review system with existing loyalty program infrastructure.
Open Question: What is the optimal point reward structure for driving high engagement and generating meaningful reviews?

De-scoped: Initial integration with a complex AI-powered review system.

Trade-off: Focusing on gamification over AI-powered suggestions might limit the potential for personalized prompts in the initial phase.
