

Zomato Review Quest

A gamified approach to encourage reviews.

Team: Rating and Review

Contributors: Faraz Ali

Status: In Development

Launching On: TBD

Resources: Reference [PRDs](#)

Problem Definition

Zomato's power users, who contribute significantly to the platform's revenue, often neglect to leave reviews after positive experiences. This results from a lack of incentives, forgetting to write, uncertainty about content, and a cumbersome review process.

Increasing the volume and quality of reviews will enhance platform trust, boost restaurant visibility, and drive user engagement and loyalty. Addressing this issue is crucial now due to increasing competition in the food delivery market, making it essential to retain and engage power users effectively.

Goals

- **Increase Review Volume:** Achieve a 10% increase in reviews written by power users within 3 months.
- **Improve Review Quality:** Raise the average length and detail of reviews by 10% within 3 months.
- **Enhance User Engagement:** Increase the number of power users interacting with the review system by 10% within 3 months.

These metrics are critical to driving trust and user retention on the platform.

Non-Goals

- The project will not address review moderation or issues with fake reviews.
 - It will focus solely on product outcomes related to review engagement.
-

Validation of the Problem

- 66.6% of users have never left a review.

- 33.3% cite a long review process as a deterrent.
 - 53.3% of users indicated they would be motivated by incentives.
 - Competitive analysis highlights gamification as an effective strategy for engagement.
-

Understanding the Target Audience

Segment: Power Users

Persona:

- **Rishi, 30, Software Engineer, Pune:** Orders 4 times a week, values convenience, and often forgets to write reviews.
- **Anchal, 22, Graphic Designer, Delhi:** Orders 5 times a week, unsure about her review's impact, and seeks rewards for effort.

Pain Points:

- Forgetting to write.
 - Lack of incentive.
 - Uncertainty about content.
-

Solution

Overview:

Transform the review process into a gamified experience using quests, points, badges, and leaderboards to motivate users.

Key Features:

- **Daily Review Quest:** Prompt users post-order to complete a review quest.
- **Point Rewards:** Award points based on review quality.
- **Progression & Badges:** Track user progress with a visual bar and offer badges for milestones.
- **Leaderboards:** Encourage friendly competition.
- **Exclusive Rewards:** Include discounts and special offers.

Key Logic:

- Points are calculated based on review detail.
- Quest progression unlocks badges and rewards.

System Diagram:

The system diagram should capture the interactions between the following components:

1. **User Interface (Mobile App):**

- Displays the gamified elements: quests, progress bars, badges, leaderboards, and reward system.
- Triggers notifications for review reminders.
- 2. **Review System Backend:**
 - Stores and processes reviews.
 - Integrates with the loyalty points system to allocate rewards based on criteria like length and detail of reviews.
 - Tracks quest progression and badge achievement.
- 3. **Gamification Engine:**
 - Calculates points and unlocks badges based on user interactions.
 - Updates leaderboards and progression systems.
- 4. **Loyalty Program Integration:**
 - Manages the allocation of loyalty points and communicates with the rewards database.
- 5. **Analytics and A/B Testing Framework:**
 - Measures the impact of the gamified system on review volume, quality, and user engagement.
- 6. **Notification Service:**
 - Sends timely reminders to users about completing their quests.

Data Instrumentation:

Track events like review completion, badge unlocks, and leaderboard activity to measure key metrics.

Edge Cases:

Handle duplicate reviews, spam content, and leaderboard manipulation.

Product Marketing:

Use in-app tutorials, push notifications, email campaigns, and social media promotions to drive awareness.

Launch Readiness

Key Milestones:

- Design complete: 4 weeks.
- Development complete: 8 weeks.
- QA timelines: 2 weeks.
- Dogfooding: 2 weeks.

Launch Checklist:

- Support readiness: FAQs and escalation workflows.
- Operational alignment: Integration with loyalty programs.
- Stakeholder communication: Engineering, marketing, and design teams.

Experimentation Plan:

- A/B test the gamified system against the current one for review volume, quality, and engagement.
-

Future Iterations

- Introduce personalized review prompts powered by AI.
 - Add social sharing features for badges and leaderboards.
 - Include photo/video reviews for richer feedback.
-

Risks & Mitigations

- **Low Engagement:** Continuously optimize the reward structure through testing.
 - **Gaming the System:** Use algorithms to detect and discourage spamming.
 - **Reward Fatigue:** Refresh reward offerings periodically.
-

Open Questions & Decisions Taken

- Optimal point structure for driving meaningful reviews remains under evaluation.
 - Prioritizing gamification over AI-driven suggestions in the initial launch phase.
 - Trade-off: Initial de-scoping of AI-generated review prompts for simplicity.
